# Tectonic

Designer: Alain Gilles

Tectonic is a table with a top available in two versions, made of steel wire or in full sheet metal, available in numerous colours. It can be used as a unique or grouped piece, with multiple elements joined together freely, in the living area or in the bedroom. An object characterised by its decisive visual impact thanks to its strongly geometric appearance, which gives the possibility of creating original configurations by combining multiple

elements in a creative way. Especially in the version with a top in painted steel wire, Tectonic continually changes its appearance according to the perspectives from which it is observed, creating distinct plays of light and shadow. A functional and decorative element that allows everyone to freely design their own space.
